## Multigenerational Substance Use

**Friday, February 22, 2019 8:30 am – 11:45 am (3-hours)**

**(8:00 am – 8:30 am Registration Check-in & Continental Breakfast)**

*This program is funded in part by the William B. and Sylvia A. Hunsberger Fund*

The inheritance of family substance use disorders is often a combination of genetic factors and environmental circumstances. It can be a destructive force in families and makes recovery difficult for the individual. The focus of this seminar will be on the impact of family substance use, co-occurring disorders, generational views regarding the use of substances, preferences of substances by age groups, co-dependency, and the misuse of prescription and OTC medications. Assessment tools and interventions strategies will be covered.

### **At the conclusion, attendees should be able to:**

- Discuss the Family Systems Theory and how it may influence generational substance use
- Explain the various roles the substance disordered family members assume in the family system
- Identify common co-occurring disorders among individuals who have a substance use disorder
- Discuss differing generational views about the use of prescription drugs, over the counter medications and illicit substances
- Identify treatment strategies for the individual and the family
